DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 2, 3, 8, 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Takaya et al US Pat. 5,157,576.

Takaya et al disclose a circuit a coil divided into four inductors (21 22 23 24); a laminated body including a plurality of insulating layers (1 and 2) and at least four stages of a low pass filter including the four inductors and plurality of capacitors (11 and 13). The four inductors are defined by a plurality of coil conductor patterns arranged on the same plane of insulating layers of the laminated body. Each of the four inductors has a coil axis that is parallel with a laminating direction of the insulating layers of the laminated body, and winding direction of adjacent ones of four inductors are opposite to each other. The coil conductor patterns have the same shape. The insulating layers include magnetic material. (See figure 6)

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2817

Allowable Subject Matter

Claims 4, 5, 9, 10 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 6, 7, 15, 16 and 18-22 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: With the regards to claims 6 and 20, the prior art of record does not disclose or fairly teach the ratio of the vertical dimension to the lateral dimensions of each of the coil conductors patterns is approximately 1.
